1. GENERAL SPECIFICATIONS

1-1.DESCRIPTION:

The AGM 12864S-801 is a dot matrix mono Liquid Crystal Display Module(LCM). This specification covers the delivery requirements for the liquid crystal display delivered by AGTECHNOLOGIES to Customer.

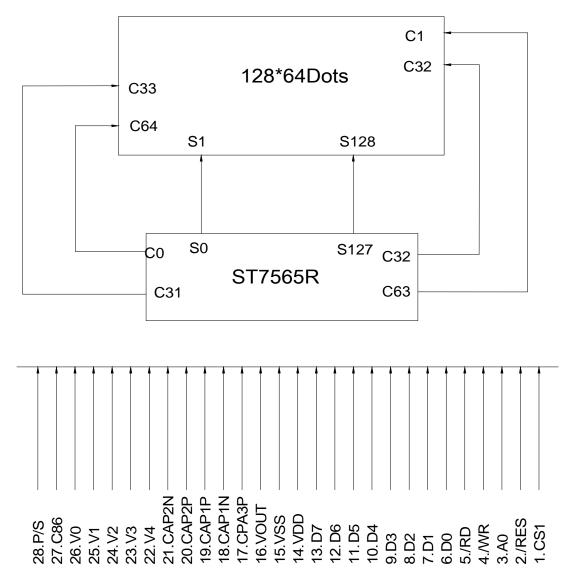

1-2. FEATURES

- (1) Display Type: STN, Negative Blue, Transmissive, 6 O'clock
- (2) Driving Method: 1/65 duty, 1/9 bias
- (3) Built-in controller: ST7565R
- (4) With White Backlight

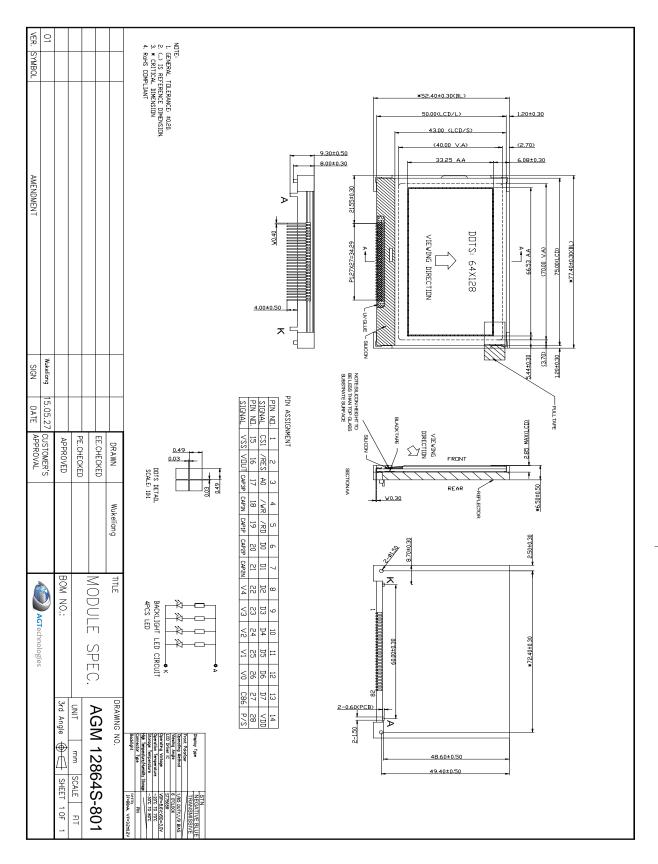

ITEM	SPECIFICATIONS	UNIT
DISP.CONSTRUCTION	128*64 Dots	
OUTLINE DIMEMSIONS	77.4(W)*52.4(H)*6.5(T)	mm
VIEWING AREA	70.0(W) *40.0(H)	mm
ACTIVE AREA	66.53(W) * 33.25(H)	mm
DOT SIZE	0.49(W) * 0.49(H)	mm
DOT PITCH	0.52(W) x 0.52(H)	mm
ASSY.TYPE	COG+FPC+BL

6. TIMING CHARACTERISTICS

System Bus Timing for 6800 Series MPU

(VDD = 3.3V , Ta = 25°C)

ltem	Signal	Symbol	Condition	Min.	Max.	Unit
Address setup time	4.0	tAW6		0	_	
Address hold time	A0	tAH6		0	—]
System cycle time		tCYC6		240	_	1
Enable L pulse width (WRITE)	1	tEWLW		80	—	1
Enable H pulse width (WRITE)	E	tEWHW		80	_]
Enable L pulse width (READ)	1	tEWLR		80	_	ns
Enable H pulse width (READ)		tEWHR		140]
Write data setup time		tDS6		40	_]
Write data hold time	D(7:01	tDH6		10	_	1
Read data access time	D[7:0]	tACC6	CL = 100 pF	—	70]
Read data output disable time]	tOH6	CL = 100 pF	5	50	

11/30

= 2.7V	

Item	Signal	Symbol	Condition	Min.	Max.	Unit
Address setup time	AO	tAW6		0	_	
Address hold time	AU	tAH6		0	_	
System cycle time		tCYC6		400	-]
Enable L pulse width (WRITE)		tEWLW		220	_]
Enable H pulse width (WRITE)	E	tEWHW		180	_	
Enable L pulse width (READ)		tEWLR		220	—	ns
Enable H pulse width (READ)		tEWHR		180	_	
Write data setup time		tDS6		40	_	
Write data hold time	D(7:0)	tDH6		0	—	1
Read data access time	D[7:0]	tACC6	CL = 100 pF	—	140]
Read data output disable time		tOH6	CL = 100 pF	10	100	

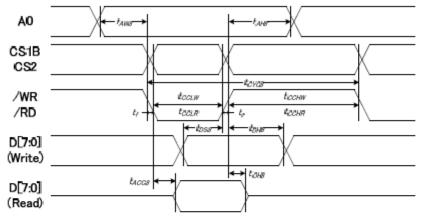

*1 The input signal rise time and fall time (tr, tf) is specified at 15 ns or less. When the system cycle time is extremely fast,

(tr + tf) ≤ (tCYC6 - tEWLW - tEWHW) for (tr + tf) ≤ (tCYC6 - tEWLR - tEWHR) are specified.

*2 All timing is specified using 20% and 80% of VDD as the reference.

*3 tEWLW and tEWLR are specified as the overlap between CS1B being "L" (CS2="H") and E.

System Bus Timing for 8080 Series MPU

(VDD = 3.3V , Ta = 25 C)

Item	Signal	Symbol	Condition	Min.	Max.	Unit

Data setup time	SDA	tSDS		20	_	
Data hold time	SDA	tSDH		10	—]
CS-SCLK time	CS1B	tCSS		20	_]
CS-SCLK time	CS2	tCSH		40	_]

(VDD = 2.7V , Ta = 25 C)

Item	Signal	Symbol	Condition	Min.	Max.	Unit
Serial clock period		tSCYC		100	_	
SCLK "H" pulse width	SCLK	tSHW		50	—	
SCLK "L" pulse width		tSLW		50	_	
Address setup time	4.0	tSAS		30	_	
Address hold time	AO	tSAH		20	—	ns
Data setup time	204	tSDS		30	—	
Data hold time	SDA	tSDH		20	_	
CS-SCLK time	CS1B	tCSS		30	—	
CS-SCLK time	CS2	tCSH		60	_	

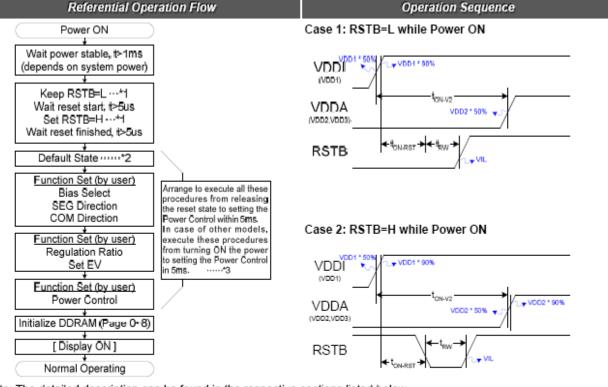

*1 The input signal rise and fall time (tr, tf) are specified at 15 ns or less.

*2 All timing is specified using 20% and 80% of VDD as the standard.

7. POWER ON/OFF SEQUENCE

7-1. POWER ON SEQUENCE

Power ON

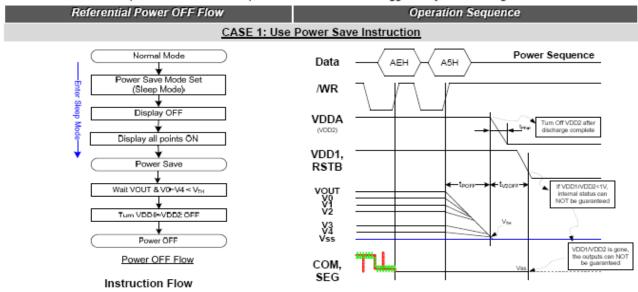

Note: The detailed description can be found in the respective sections listed below.

- 1. Please refer to the timing specification of t_{RW} and t_{R} .
- Refer to Section RESET CIRCUIT.
- The 5ms requirement depends on the characteristics of LCD panel and the external component of the power circuit. It is recommended to check with the real products with external component.
- 4. The detailed instruction functionality is described in Section INSTRUCTION DESCRIPTION;
- 5. Power stable is defined as the time that the later power (VDDI or VDDA) reaches 90% of its rated voltage.

7-2. POWER OFF SEQUENCE

Power OFF Flow and Sequence

In power save mode, LCD outputs are fixed to VSS and all analog outputs are discharged. The power can be turned OFF after ST7565R is in the power save mode. The power save mode can be triggered by the following two methods.

After the built-in power circuits are OFF and completely discharged (the power level of built-in analog circuit is smaller than V_{TH} of LCD panel), the power (VDDI, VDDA) can be removed. V_{TH} is around 0.2V to 1.0V.

Normal Mode

Set RSTB=L (wait > t_{RM})

Set RSTB-H

Wait 260m s

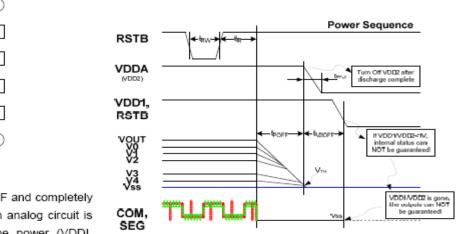

Turn VDD1~VDD2 OFF

Power OFF

Power OFF Flow

Instruction Flow

After the built-in power circuits are OFF and completely discharged (the power level of built-in analog circuit is smaller than V_{TH} of LCD panel), the power (VDDI, VDDA) can be removed. V_{TH} is around 0.2V to 1.0V.

Note:

- t_{POFF}: Internal Power discharge time. Discharge time for built-in circuit is dependent on user's system design.
- t_{V2OFF}: Period between VDDI and VDDA OFF time. => 0 ms (min).
- It is NOT recommended to turn VDDI OFF before VDDA. Without VDDI, the internal status cannot be guaranteed and internal discharge-process maybe stopped. The un-discharged power maybe flows into COM/SEG output(s) and the liquid crystal in panel maybe polarized.
- 4. IC will NOT be damaged if either VDDI or VDDA is OFF while another is ON.
- 5. The timing is dependent on panel loading and the external capacitor(s).

8. RECOMMENDED INITIAL CODES

void Initial(void)

{

}

(1) DEFINITION OF VIEWING ANGLE

(4) MEASURING INSTRUMENTS FOR ELECTRO-OPTICAL CHARACTERISTICS

21/30

*1.Light source position for measuring the reflective type of LCD panel*2.Light source position for measuring the transflective / transmissive types of LCD panel

(5) DEFINITION OF LUMINANCE UNIFORMITY

To test for uniformity, the tested area is divided into 3 rows and 3 columns. The measurement spot is placed at the center of each circle as below.

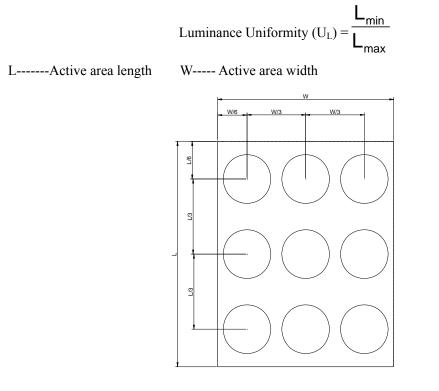

Fig .Definition of luminance uniformity

 \boldsymbol{L}_{min} : The measured minimum luminance of all measurement position.

L_{max} : The measured maximum luminance of all measurement position

14. ENVIRONMENTAL ABSOLUTE MAXIMUM RATINGS

ITEM	SYMBOL	CONDITIONS	CRITERION
OPERATING TEMPERATURE	TOPR	-20°C ~+70°C	NO DEFECT IN DISPLAYING AND
	TOTK	-20 C - 170 C	OPERATIONAL FUNCTION
STORAGE TEMPERATURE	TSTG	-30°C∼+80°C	NO DEFECT IN DISPLAYING AND
STORAGE TEMI ERATORE	1510	-50 C 10 180 C	OPERATIONAL FUNCTION
HUMIDITY	_	See Note	WITHOUT CONDENSATION

Note: Test condition:

1) Temperature and humidity: if no specification, temperature set at $25+/-2^{\circ}$ C, and humidity set at 60+/-5% RH.

2)Operating state: all the tests to which the samples subject should be in operating condition.

KELIADILIIIIIE		
ITEM	CONDITIONS	CRITERION
Operating	HIGH TEMPERTURE +70°C 120HRS	No defect in displaying and operational
Temperature	LOW TEMPERTURE -20°C 120HRS	function
Storage	HIGH TEMPERTURE +80°C 120HRS	No defect in displaying and operational
Tempereature	LOW TEMPERTURE -30°C 120HRS	function
High Humidity & high Temp	50℃ 90%RH 120HRS	No defect in displaying and operational function
Vibration	 Operating Time: 30 minutes exposure for each direction (X,Y,Z) Sweep Frequency: 10~55Hz (1 min) Amplitude: 1.5mm 	No defect in displaying and operational function
Thermal Shock	$-25^{\circ}C(30\text{mins}) \leftrightarrow +75^{\circ}C(30\text{mins}) 50 \text{ cycles}$	No defect in displaying and operational function
Package laminative load test	Atmospheric pressure:86kPa~106kPa, Temperature:15°C~35°C, Humidity:20%~75% Test machine speed:10mm/min The package laminative load on Sample carton: The weight of a box of production(Kg) multiply 8*2*24H	No defects in display and operational functions

15. RELIABILITY TEST

Packing Drop Test	Droping from a height of 1m onto concrete surface (1 corner, 3 edges, 6 faces)	No defect in appearance
Life Time	50,000H	

NOTE: The samples must be free from defect before test, must be restore at room condition at least for 2 hours after reliability test before any inspection.

Each item need 8pcs at least for testing before qualification.

16. THE STANDARD OF INSPECTION

16-1 SAMPLING PLAN

Unless there is other agreement, sampling plan for incoming inspection should follow GB2828-2003.

16-1-1 Lot size: Quantity per shipment as one lot (different model as different lot .)

- 16-1-2 Sampling type: Normal inspection, single sampling.
- 16-1-3 Sampling level: Level II.
- 16-1-4 Acceptable Quality Level Major defect: AQL=0.40 Minor defect: AQL=0.65 Total defect : AQL=0.65

16-2 PANEL INSPECTION CONDITION

16-2-1 Environment:Room Temperature: 25±5°C.Humidity: 55±5% RH.Illumination:800~1200Lux.

16-2-2 Inspection Distance: 25 ± 5 cm from the inspector to the module.

16-2-3 Inspection Angle: The inspector shall rotate the display 45° from the centerline of the viewing direction to assure that clear cosmetic flaws do not exist on the surface within the view area.

16-2-4 Viewing time for inspector is 6-10 Seconds.

16-3 MODULE INSPECTION STANDARDS

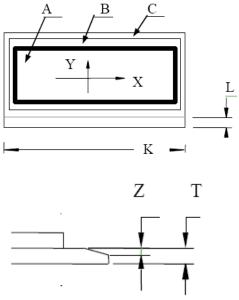

- 16-3-1 Defect definition
- MAJOR: display or functional defects, serious deviation from the specifications, customers can not work properly; Severe skin defects, serious deviation from the specifications, the client does not work properly.
- MINOR: slightly deviate from the specifications, does not affect the product function, but the appearance of an impact on product
- Note: The following standard if no entities are specified, with mm meter.

16-3-2 Product area and size code definition

A area: said display active area(characters display)

- B area: says visual area (except A area)
- C area: the unvisual areas.
- T: it says he thickness of the single glass
- L: said glass pin lengths
- K: said product length
- X :said glass long side direction or glass edge direction along the length of the gap
- Y :said glass short side direction or gap with glass edge along the vertical length

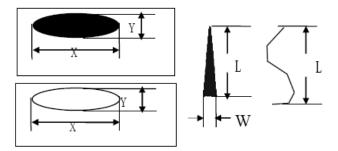

Z: the thickness of crack or gap

16-3-2 Point, line definition

point: $\Phi = (X + Y) / 2$

The length of the X says point length; Y says point width Line:L says the length of the line; W says line width

16-3-3 Inspection items and specification for appearance(power off)

No.	Item	Criterion					
1	Dimension	Dimension out of the specification					
		Dimension out of the specification 1. 16-3-4Inspection items and specification for display defect(power on)

17. USING LCD MODULES

17-1 LIQUID CRYSTAL DISPLAY MODULES

LCD is composed of glass and polarizer. Pay attention to the following items when handling.

- (1) Please keep the temperature within specified range for use and storage. Polarization degradation, bubble generation or polarizer peel-off may occur with high temperature and high humidity.
- (2) Do not touch, push or rub the exposed polarizer with anything harder than an HB pencil lead (glass, tweezers, etc.).
 - (3) N-hexane is recommended for cleaning the adhesives used to attach front/rear polarizers and reflectors made of organic substances which will be damaged by chemicals such as acetone, toluene, ethanol and isopropylalcohol.
 - (4) If the display surface becomes contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If it is heavily contaminated, wipe gently with absorbent cotton or other soft material like chamois soaked in Isopropyl alcohol or Ethyl alcohol. Do not scrub hard to avoid damaging the display surface.
 - (5) Wipe off saliva or water drops immediately, contact with water over a long period of time may cause deformation or color fading.
 - (6) Avoid contacting oil and fats.
 - (7) Condensation on the surface and contact with terminals due to cold will damage, stain or dirty the polarizers. After products are tested at low temperature they must be warmed up in a container before coming is contacting with room temperature air.
 - (8) Do not put or attach anything on the display area to avoid leaving marks on.
 - (9) Do not touch the display with bare hands. This will stain the display area and degradate insulation between terminals (some cosmetics are determinated to the polarizers).
 - (10) Exercise care to minimize corrosion of the electrode. Corrosion of the electrodes is accelerated by water droplets, moisture condensation or a current flow in a high-humidity environment.
 - (11) As glass is fragile. It tends to become or chipped during handling especially on the edges. Please avoid dropping or jarring.

17-2 PRECAUTION FOR HANDING LCD MODULES

Since LCM has been assembled and adjusted with a high degree of precision, avoid applying excessive shocks to the module or making any alterations or modifications to it.

- (1) Do not alter, modify or change the the shape of the tab on the metal frame.
- (2) Do not make extra holes on the printed circuit board, modify its shape or change the positions of components to be attached.
- (3) Do not damage or modify the pattern writing on the printed circuit board.
- (4) Absolutely do not modify the zebra rubber strip (conductive rubber) or heat seal connector.
- (5) Except for soldering the interface, do not make any alterations or modifications with a soldering iron.
- (6) Do not drop, bend or twist LCM. In particular, do not forcibly pull or bend the I/O cable or the backlight cable.
- (7) In order to avoid the cracking of the FPC, you should to pay attention to the area of FPC where the FPC was bent .the edge of coverlay; the area of surface of Ni-Au plating, the area of soldering land, the area of through hole.

17-3 ELECTRO-STATIC DISCHARGE CONTROL

Since this module uses a CMOS LSI, the same careful attention should be paid to electrostatic discharge as for an ordinary CMOS IC.

- (1) Make certain that you are grounded when handing LCM. To minimize the performance degradation of the LCD modules resulting from destruction caused by static electricity etc., exercise care to avoid holding the following sections when handling the modules. Exposed area of the printed circuit board. Terminal electrode sections.
- (2) Before remove LCM from its packing case or incorporating it into a set, be sure the module and your body have the same electric potential.
- (3) When soldering the terminal of LCM, make certain the AC power source for the soldering iron does not leak.
- (4) When using an electric screwdriver to attach LCM, the screwdriver should be of ground potentiality to minimize as much as possible any transmission of electromagnetic waves produced sparks coming from the commutator of the motor.

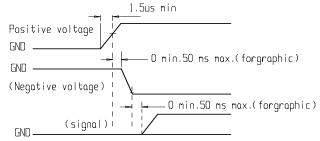

(5) As far as possible make the electric potential of your work clothes and that of the work bench the ground potential.

(6) To reduce the generation of static electricity be careful that the air in the work is not too dried. A relative humidity of 50%-60% is recommended.

17-4 PRECAUTIONS FOR OPERATION

(1) Viewing angle varies with the change of liquid crystal driving voltage (VO). Adjust VO to show the best contrast.

- (2) Driving the LCD in the voltage above the limit shortens its life.
- (3) If the LCD modules have been operating for a long time showing the same display patterns, the display patterns may remain on the screen as ghost images and a slight contrast irregularity may also appear. A normal operating status can be regained by suspending use for some time. It should be noted that this phenomenon does not adversely affect performance reliability.
- (4) Response time is greatly delayed at temperature below the operating temperature range. However, this does not mean the LCD will be out of the order. It will recover when it returns to the specified temperature range.
- (5) If the display area is pushed hard during operation, the display will become abnormal. However, it will return to normal if it is turned off and then back on.
- (6) Condensation on terminals can cause an electrochemical reaction disrupting the terminal circuit. Therefore, it must be used under the relative condition of 40°C , 50% RH.
- (7) When turning the power on, input each signal after the positive/negative voltage becomes stable.

17-5 STORAGE

When storing LCDs as spares for some years, the following precaution are necessary.

(1) Store them in a sealed polyethylene bag. If properly sealed, there is no need for dessicant.

(2) Store them in a dark place. Do not expose to sunlight or fluorescent light, keep the temperature between 0° C and 35° C.

3) The polarizer surface should not come in contact with any other objects. (We advise you to store them in the container in which they were shipped.)

- (4) Environmental conditions :
 - Do not leave them for more than 160hrs. at 70°C.
 - Should not be left for more than 48hrs. at -20°C.

17-6 SAFETY

- (1) It is recommended to crush damaged or unnecessary LCDs into pieces and wash them off with solvents such as acetone and ethanol, which should later be burned.
- (2) If any liquid leakes out of a damaged glass cell and comes in contact with the hands, wash off thoroughly with soap and water.

17-7 LIMITED WARRANTY

Unless agreed between AGT and customer, AGT will replace or repair any of its LCD modules which are found to be functionally defective when inspected in accordance with AGT LCD acceptance standards (copies available upon request) for a period of one year from date of shipments. Cosmetic/visual defects must be returned to AGT within 90 days of shipment. Confirmation of such date shall be based on freight documents. The warranty liability of AGT limited to repair and/or replacement on the terms set forth above. AGT will not be responsible for any subsequent or consequential events.

17-8 RETURN LCM UNDER WARRANTY

No warranty can be granted if the precautions stated above have been disregarded. The typical examples of violations are :

- Broken LCD glass.

- Circuit modified in any way, including addition of components.

Module repairs will be invoiced to the customer upon mutual agreement. Modules must be returned with sufficient description of the failures or defects. Any connectors or cable installed by the customer must be removed completely without damaging the PCB's eyelet, conductors and terminals.
